DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Applicant's "Response to Office Action" filed 1/07/2005, with respect to the rejection(s) of claim(s) 1-7 under 35 U.S.C. 102(b) as being anticipated by Harris et al. (U.S. #5,584,070) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Harris et al. (U.S. #5,584,070) and Mutsuhashi et al. (U.S. #5,548,335).

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harris et al. (U.S. #5,584,070) in view of Mutsuhashi et al. (U.S. #5,548,335).

As for claim 1, Harris discloses a portable communication device, called "Wireless Pager with Separable Receiver Unit and Transmitter Unit" (Title and Abstract). Harris' portable communication device (fig. 3, ref. 102) comprises:

a casing (fig. 3, refs. 104/124; col. 6, lines 24-25) with a transmitter unit and a receiver unit where both serve as a host module (fig. 2, refs. 42, 44, 46, 50, and 64) set inside the casing (col. 4, 18-46).

As shown in figure 2, a transmitter (64) and a receiver (44) also serve as a wireless communication module, set inside the casing and electrically connected to the host module for transmitting/receiving a communication signal (Abstract and fig. 2);

an image-capturing unit (fig. 3, ref. 66) set on (fig. 3, ref. 126) the casing and electrically connected (fig. 2, ref. 70, 92, 94, 96) to the host module for capturing an optical image of an object (col. 5, lines 12- 14);

the receiver unit (fig. 2, ref. 40) and the transmitter unit (fig. 2, ref. 42)also serve as a man-machine interface (col. 4, lines 33-46; col. 5, lines 30-37), set on the casing and electrically connected to the host module for controlling the host module (fig. 2);

an acoustic-controlled module (fig. 2, ref. 62), set inside the casing (fig. 3, refs. 104/124) and connected to the host module (fig. 2, refs. 42, 44, 46, 50, and 64),

a voice-input unit set (fig. 2, ref. 62) on the casing and electrically connected to the acoustic camera module for receiving a voice message (col. 4, lines 61-67; col. 5, lines 20-37).

However, Harris does not disclose an acoustic-controlled camera module for controlling the image-capture unit. In a similar field of endeavor, Mitsuhashi discloses an acoustic-controlled camera module (fig. 5, ref. 430) for controlling the image-capture unit (fig. 2, ref. 110). Please read col. 6, lines 37-60. In light of the teaching of Mitsuhashi, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Harris'

Art Unit: 2612

image capture unit with an acoustic-controlled camera module for controlling the image-capture unit in order to provide an alternate way to control the image capturing unit.

As for **claim 2**, Harris, as modified by Mitsuhashi, additionally discloses the portable communication device, wherein the device further comprises a first connecting port set on the casing and is electrically connected to the host module, and the connecting port with image-capturing unit has a second a removable electrical connection to the first connecting port (fig. 2, ref. 70, 92, 94, 96; col. 5, lines 50-60).

As for **claim 3**, Harris, as modified by Mitsuhashi, further discloses the portable communication device, wherein the man-machine interface comprises an instruction-input unit (col. 4, lines 33-46).

As for **claim 4**, Harris, as modified by Mitsuhashi, further discloses the portable communication device, wherein the man-machine interface comprises a voice-output unit (fig. 2, ref. 54).

As for claim 5, Harris, as modified by Mitsuhashi, further discloses the portable communication device, wherein the man-machine interface comprises an image-output unit (fig. 2, ref. 52).

As for **claim 6**, Harris, as modified by Mitsuhashi, further discloses the portable communication device, wherein the man-machine interface comprises an instruction-input unit and an image-output unit (fig. 2, ref. 52, 54).

As for **claim 7**, Harris, as modified by Mitsuhashi, further discloses the portable communication device, wherein the instruction-input unit is integrated with the image-output unit for a touch-control display screen (col. 4, lines 33-46; col. 6, lines 33-47).

Art Unit: 2612

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Thompson (U.S. #6,413,209)

A voice-activated remote-control that may be employed as the camera remote-control (Fig. 16).

Ishizaka et al. (U.S. Pat. App. #2004/0169733)

Transmitting speech signals from the receiving apparatus to the wireless image pickup apparatus, speech-transmitting means, such as an audio modulation unit and an audio transmitter, may be provided on the receiving apparatus.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carramah J. Quiett whose telephone number is (571) 272-7316. The examiner can normally be reached on 8:00-5:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wendy Garber can be reached on (571) 272-7308. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/708,226

Art Unit: 2612

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
